LETTER TO CARROLL OLCOTT, ... - 7
-- by Assoc. H.D. Clark --

PERIODICALS and
CORRESPONDENCE . . . . . 8 - 9

****

CLIPS, QUOTES, and COMMENTS is issued on the first of each month, by the Borderland Sciences Research Associates -- 3524 Adams Ave., San Diego 16, California. Sample copy on request. - Most back issues available.

Twelve issues (12 months) -- $5.00; six issues (6 months) for $2.50; two issues for $1.00.

Meade Layne, M.A., Editor and BSR Director.

"THE TRUTH ABOUT COLOR THERAPY"

(The title quoted above is that of a 40-page brochure by R.J. Moore, N.D., D. Ps.Y., F.B.R.A., of Tauranga, New Zealand; (No.1 Mission St.). Dr. Moore is an official of the British Radiesthesia Association, Australasian Group, and has specialized in radiesthesia and color therapy. Space in CQC permits only brief excerpts and summary).

. . . If we recognize the basic fact that colour is vibration, and that vibration is the essence of life, we can recognize the full importance of colour as a therapeutic agent. Wherever we are, we are subject to colour vibration.

In the vast range of the electro-magnetic spectrum, only a very minute part is visible to us. The visible range is between the infra-red and the ultra-violet, and the wave length of between 4000 and 8,000 Angstrom units (10^{-10} meter. ml). Ordinary daylight is really composed of colors. We are immersed in a vast electro-magnetic field of invisible colour radiations. Call it what you will - cosmic radiation, universal vibration - it matters little. . . (pgs 5.6).

Researchers in many parts of the world have discovered that all substances have a specific colour value by which they can be identified. This applies not only to inanimate objects, but also to living creatures . . . All matter is of atomic structure, and as such radiates on a specific frequency which depends on the nature of the substance. This radiation produces around an object concentric shells of influence. Within these exist colour bands, which are varying rates of vibra - tion produced by interaction of radiations, which pulsate through the energy field around an object. As the nature of the element depends on the pattern and arrangement of its atoms, the intermingling pattern of the colour values of the individual atoms produces a colour vibration which is specific to that particular element.

All objects, both animate and inanimate, produce a field of radiation which when limited to certain frequencies amount to blends of colour. This was proved by Baron Von Reichenback over 150 years ago. (5,6). . . We do not have to <u>see</u> colour to be affected by it. A blind man does not see it, yet he is affected by it as anyone else ... The colour sensitive cells of the body are always receptive to colour radiation ... Light is the basis of creation ...

CURRENT) One theory is that colour will 'knock out', neutralize or inhibit
THEORIES) bacteria - and it is a fact that colour can inhibit the growth of bacteria and living cells ... It is more reasonable to assume that the bacteria are not killed but their development is arrested.

The Vitality Development theory. Here the colours are selected which bring about an increase in general vitality. When disease invades the body a state of imbalance is produced between the sympathetic nervous system and the parasympa - thetic. This imbalance can take place in any part of the body or organ.

The theory ofCellular Polar Equilibrium differs in many ways from the fore - going. It is based on the theory of the cell, of George Crile, and the theory of cellular Oscillatory Disequilibrium of Lachovsky. The theory of Crile appears to fit the picture more than any other. When we apply colour we are applying a vibration of a specific frequency. The colour selected is of the frequency required to bring about a correction in balance between the positive and negative poles. It requires a very subtle radiation to do this. To use an electric charge to correct the balance is rather like trying to charge a battery direct from a power station. A source of energy is required which can affect the minute structure of the cells.

Lakhovsky, a French-Russian engineer, advanced the theory that the cell is electrical, that "every living being emits radiation; disease is the result of an oscillatory disequilibrium in the cellular structure". Each cell is believed to have its own frequency and wave length.

CLUE TO COLOUR) THERAPY- and -) NATURE OF DIS-) EASE , , ,)

The development of bacteria is produced by lowered vitality - and this is caused by cellular imbalance. There is really only this one theory, the bi-polar - the others being side effects. Since every cell contains the vital spark of life, it follows that the mind must be represented in every cell. As every cell radiates on a specific frequency, any stress can alter this frequency and cause an upset in the polar balance. Also, any crystal formation in a joint or muscle will upset the polar balance. Non-symmetrical crystals under pressure produce an electric current. "Natural electricity" plays a large part in the maintenance of health; it is of very high frequency which varies according to its function. Natural phenomena require correction by an equally natural electrical force. Cellular imbalance can only be properly corrected by microwaves of natural, human or weak-powered energy which has been modified to a specific vibration, as in the case of tints and shades of colour.

THE THREE ASPECTS) OF COLOUR THERAPY)

These may take the form of (1) treatment with coloured silks and cottons (2) coloured light through filters, (3) calibrated instruments on which a colour frequency may be set on dials. Colour therapy is nothing more than a system of treatment by a radiated or conducted micro-wave of energy, modified to a specific high frequency in a subtle form which is compatible to the frequency of a particular cell group.

TECHNIQUES IN) COLOUR THERAPY)

A number of therapists use oscillators which are adapted for this purpose. These are run by electrical power and the dis - charge acts as a carrier wave for the colour. Many other instruments have been devised by individual practitioners. But a tendency has developed to turn to the use of natural energy. A source for this has been reached which can be modified to the desired frequency by coils and resistances and by the use of crystal detectors. Instruments of this type have been in use for some time and are known as Natural Energy Pulsators. There are six dials which can set the rates for any shade or tint. The power (natural energy) is brought in through an aerial and the instrument is also connected to the earth. Instead of using the actual color samples we are using the frequency of their vibration . . . .

(The second half of this brochure, from about page 14 on, includes: Colour Therapy and Radiesthesia (Ch. 4) -- The Colour Controversy (and use of the coil), Ch.5 -- Colour Therapy and Nature Cure (Ch.6) -- "Proof" (Ch.7) -- Anticipation Ch. 8) -- Truth (Ch. 9) -- Technical Terms (Ch. 10)

It seems obvious to the present writer, that the future of the 'healing Arts' lies in the field of electronic therapy - and that colour therapy is an applica - tion of electronics and certain to be of major importance. As to "recognition" by the A.M.A., the B.M.A and other allopath groups, R.J. Moore's remark applies:

> "Neither is Osteopathy (recognized), nor Chiropractic, Naturopathy, Homeopathy, Biochemics, Herbal Treatment, or Metaphysical healing. Further comment unnecessary". (p. 25).

The brochure here reviewed is an excellent source of clear basic information about Colour Therapy, and we recommend it to our Associates. Address all inquiries to BRITISH RADIESTHESIA ASSOCIATION (Australasian Group), 1 Mission St., Tauranga, New Zealand. No price stated; inquire, or send $1.00 pro tem.

ATOMIC POWER - and - DID ATLANTIS EXIST

(From THE SEARCHLIGHT, published by the Association for Research & Enlightenment, Virginia Beach, Va; Vol. viii, No. 7, July 1956. The Searchlight Editor writes: "Interest in this article and in this subject has impelled us to reprint it from the October 1945 Bulletin of the A.R.E."

Persistent and increasing interest in the two subjects mentioned, and also in the remarkable powers of Edgar Cayce, seem to me to justify this partial reprint in C.Q.C. (Ed.).

. . . . Many students of psychic information are agreed that development of atomic power has occurred in our day for the second time in history of the earth; that its first occurrence was in Atlantis. There it was used for such selfish purposes that it was the means, along with other types of power, whereby civilization was completely destroyed. So completely, in fact, that today most people are of the opinion that Atlantis never existed.

Edgar Cayce began to wonder about the reality of Atlantis when information about it began to come through the first life readings in 1924. These psychic documents referred to experiences in Atlantis as matter-of-factly as to the entity's experiences in the days of the American revolution or in the Crusade period . . . in 1932 they obtained a series of readings to serve as a lecture on Atlantis itself. . . . Again and again it was indicated in the Cayce readings, that souls who had once lived at the height of Atlantean civilization ... were re-entering the earth today. Our civilization apparently closely parallels that former culture. It seems to provide an opportunity for those souls who will try to handle their responsibilities better - and also the attendant risk of failing again. TO quote briefly:

> "In the present experience there is a re-entering or rebirth into the earth's environs of those who were active in Atlantis ... Great numbers of Atlanteans are in the earth at present, as well as great hordes of those who lived in that period when the Master walked in the earth ... Most all have passed through Atlantis ... Of this ye may be very sure; no leader in any country or clime, whether friend or foe of what the entity believes - is other than an Atlantean."

According to the readings, the civilization of Atlantis existed over a period of 200,000 years. . . The land mass began to break up and disappear about 10,700 B.C. Lemuria went under first. . . The Atlantean was an age of electricity like ours. Not only were there great cities, but also means of transportation like aeroplanes and submarines ... means of communication like our radio and television... advanced techniques of heating and lighting ... more advanced metal fluxes than we now possess. . . One prime source of power, according to the readings, was energy released by breaking up of atoms. Not only were the Atlanteans able "to build what could transpose or build up the elements about them, but also to use a power to transport them bodily from one portion of the universe to another. . . This was accomplished not only through the use of recently discovered gases and other forces, but also through the use of electrical and aeriatic formations; by the breaking up of atomic forces to produce a propelling force for certain means and modes of transportation - as of travel, or lifting large weights, or changing the forces of nature itself. "

The use of Uranium, of crystal lenses, the wireless transmission of power and other natural forces was familiar to the Atlanteans, but in the end led to immense catastrophes. 'It seems possible, even probable' (says the A.R.E. Editor) that we are following in their footsteps.' "To be a channel of blessing to someone, today, now" is said to be the best hope and purpose of our present incarnation.

REPLY TO QUESTION

Submitted to the Mark Probert Control Raymond Natalli
August 12, 1956

QUESTION:

What is the force of which electricity, magnetism, and gravity are three manifestations?

REPLY:

The expanding and contraction of what is called matter as it works against and away from itself. The various forms of action that this 'in-breathing' and 'out-breathing' of matter creates are called b y many names. You have named three. Man must get over the idea t h at space and matter are two different entities. When certain properties of space combine they create sensory substances, such as water, H2O. Here we have, as every school boy knows, two atoms of hydrogen and one of oxygen; or, in the case of NH 3 (ammonia), three atoms of hydrogen and one of nitrogen - and numerous other combinations to make up the vast variety of compounds. But it is not the selected number of atoms alone that creates substance, but the fact that each of the atoms in question must be moving at very precise rates of frequency, in order for them to adjust themselves to one another. To add one more atom to the three that go to make up water, would change the very exact weight that exists between these three, and the weight would be changed by a change in frequency. That which is calld matter is largely the result of motion, and were it possible to pro - duce a complete state of inertia in an atom, that atom would instantly vanish or become non-existent. Your scientists in the field of physics declare that the atom is ninety per cent nothing. Don't you think that is a brilliant statement? However, it seems to imply that the other ten per cent is a something - called Something.

This something-of-nothing seems to lie in what is called the c ore or nucleus; and the nothingness is the relativelyvast field of space that exists between the electronic bodies and the core. By all the Saints, if this is not a sorry mess! If this is what thinking does for the human mind, then I suggest that the scientist turn all the so-called material problems over to the religionists, for t h e religionist will then demonstrate his greater intelligence by the simple process of placing all problems in the hands of a something called God, who, it is said, created all these problems in the first place. That the Absolute is just as great an enigma to the religionist as the atom is to the scientist, does not faze them in the least, for they place that problem on His (male gender) hands also. Thinking is a form of questioning God - and this is an 'unpardonable sin'. But let us get back to what is called thinking on the nature of things. While I have been bluntly critical of the rather messy results of some forms of thought, it is better by far than no results at all f r o m lack of thinking. It reminds me of your story about the Chinese who was told he had a bad breath, and replied: "Bad breath is better than no breath at all."

Now if we will stop and think for a minute, we will discover that everything in nature is elliptical - and this includes "Space". In fact, it is because the structural nature of space is elliptical that all things are so. If you concur with me that such is the case, then you will have to agree that no bit of matter, regardless of its size, travels in a straight line, but rather in a series of arcs of relative sizes, depending on the force that set it in motion.

Now, to speak again of the so-called empty spaces between the electronic bodies of an atom and its nucleus. A somewhat similar condition exists in a solar system wherein the sun acts as the nucleus and the planetary bodies as the electronic 'shells'. In neither case can the existing spaces be considered a void. Where an atom is concerned, the so-called spaces consist of sub-atomic energy thrown off from the nucleus in precisely-timed quantum spurts, and they travel in extremely tight little arcs back upon the nucleus. As these unbelievably dense little lines of force erupt from the nucleus, they drive the outer electronic satellites away; and as they arc back to the core they pull them back again - thereby creating a kind of alternating positive and negative field that swings the satellite bodies around and keeps them in a definite orbit. We may call this the gravity field of the atom. If large bodies of matter have a gravity field, I can see no reason why the same is not true in smaller bits of matter, ad infinitum.

Whatever you may think you can do with what I have written here about the nature of matter, just remember it's the stuff dreams are built on, and YOU are the dreamer. Happy Dreams, my friends!

R.N.

I append a report of an unusual phenomenon, sent to BSR Hdqrs. by the Rev. H.A. Cronk (2465 Territorial Road, St. Paul 4, Minn.). We prefer to use reports verified by several witnesses, but we know the Rev. Cronk as a competent and dependable observer - and in addition, the Natalli Control, quoted above, has explicitly stated that the reported events were both possible and probable. This he has supported by technical and scientific explanations. The phenomenon itself can be stated very briefly:

On a recent night some five or six searchlight beams were in operation over the cities of St. Paul and Minneapolis, and these seemed to be exploring a space area in line with Arcturus. The sweep of these beams was at varying speeds, and a slow-moving beam was repeatedly extinguished when crossing a specific region or field. The direction of the sweep also seemed to be related to the effect mentioned. The effect was that of an obstacle in space which did not become visible by reflected or originated light, yet cancelled out a light beam moving at a specific speed. Natalli pointed out, thatsince light can be converted into electricity, matter of certain densities would have the effect of shorting out the searchlight at its source . . . . . .

(next page)

H.A. Cronk Report con. Comment by BSR Regional Director E.S.S.

. . . "This report by Rev. H.A.C. is very timely and significant; the style is a bit cryptic but the general picture is clear enough. One of the first evidential eye-witness reports of the existence of force fields that can - and I believe do wreck all manner of aircraft. The way Airforce officialdom plays ostrich to the slaughter in the air, one would think that lives are ten cents per gross. These force fields probably show up on radar, and plenty, but the swivel chair ignorers of facts are not talking - mainly, we can be sure, because it's all too puzzling to them and defies all materialistic explanation. Now, the interruption of searchlight beams by such aeroform fields, high in the air, has become visibly evidential to the 'man in the street'.

"Incidentially - and important - the Rev. Cronk's report is corroboratively remindful of the photo I had taken in a dark and closed room which showed aeroform bodies travelling and whirling out in space. You'll recall that the Yada had said that he, et al., had arranged for the picture to turn out that way, and he identified the objects on the photo as "energy nodes on the third etheric level! I still have copies of that photo, the negative and the file on this. It would seem that my photo shows what the force fields observed by the Rev. Cronk actually look like.

"I for one am in favor of printing whatever you can get together on the above phenomena - but I think it's too important to hide under a bushel by releasing a Personal Bulletin. RR or CQC is a better vehicle. There's nothing in our stuff on the above that officialdom could rationally or legally object to. By bringing it out in the open the BSRA can get credit for another scoop, rather than let some one else get it by merely quoting from the P.B. . . ."

(The BSR Director greatly appreciates constructive opinions and advice from the Regional Directors, as well as from <u>any</u> BSR Associate or reader who is seriously interested in 'Borderland' problems. ml).

Subsequent to typing the last three lines above, the following note was received from Natalli: That it was easily within the powers of the etheric visitors to create fields of energy - or of etheric matter - which would affect light beams or the radar -- that such fields or nodes were sometimes produced to disguise other operations, or to call attention -- that the means employed by them were scientific rather than purely mental. At this point the Control entered upon a mathematical discussion which I was unable to follow and had no means of recording. (ml)

<u>Editorial Change</u>:

A memorandum from London informs us that Mr. Derek D. Demster has resigned his position as Editor of <u>Flying Saucer Review</u>; his successor is the Hon. Brinsley Le Poer Trench. This (Lon.) <u>Review</u> has a wide circulation and is esteemed for its admirable format, as well as for the excellent quality of its contents. This is certain to be maintained under the new Editor, and we feel that he is favorably disposed toward BSR publications and point of view with reference to the Aeroforms. <u>Flying Saucer Review</u> is published every other month, at 1 Doughty Street, Lon., W.C. 1, England; Annual subscr. $3.50; single, .60

<u>Radiesthesia</u>: Associates interested in this subject cannot afford to neglect PENDULUM, a monthly digest, Editor Egerton Sykes, 31 Kings Road, Lon. S.W. 3, Eng. 12 issues for $3.80; single .40. -- RADIO-PERCEPTION; Pub. quarterly at York House Portugal St., W.C. 2, London, Eng. Copy, 3/ (.60)

A LETTER TO CARROLL OLCOTT (Station KNX, Los Angeles, Calif):
By BSR Assoc. Howard D. Clark.

(Assoc. Clark's letter to Mr. Olcott is accompanied by the following note to the Editor of C.Q.C. -- "Give my letter, and name and address whenever you wish. Sometimes I get tired of talking back to the radio ('free speech!') and talk back to the man behind it. We can't leave the impression that we swallow ALL of the guff - like little birds with mouths wide open for the next worm - and I mean worm. . . I was hugely interested in AMA's careful omission of any reference to DEFENDER'S broadcasts to millions of listeners, almost nightly, with detailed data about Hoxsey. They are not going to advertise the source of authentic information about cancer cures. . . I could have invited Olcott to come out here and talk to three women who have been cured of cancer by Hoxsey ... I'm going to make my squawk until the AMA takes over 'free speech' along with nearly everything else..."

H.D.C. Box 484, Yucca Valley, Calif. 8-11-6

"DEAR MR OLCOTT:

. . . . In your 5:15 broadcast af August 2 you quoted a diatribe by an AMA official against so-called 'cancer quacks. I do not consider you responsible for this amazing misstatement of facts, withholding of facts, sly inferences and outright mendacity. Most likely you had no choice.

One): The inference that the sending of literature about the Hoxsey treatment to many ministers is related to "faith healing", which it emphatically is not. But the smear will appeal to those who ridicule faith healing. Again that these "quacks" (all of them being named Hoxsey) diagnose minor ailments as cancer and readily cure them. The A.M.A. spokesman tactfully skipped the fact that thousands of cancer cases, first diagnosed by the best A.M.A. approved medics in the land, x-rayed, burned, carved, charged by the same medics, sent home by them to finish dying, furnish an important number of Hoxsey's patients. And that these CURED patients, alive now in large numbers, after years, are embarrassingly present at court hearings such as the one in Texas when the A.M.A. tried to disbar the Hoxsey staff and stop him.

"Thousands of your listeners know that the A.M.A. lost that case, threw it away to prevent these cured patients from going on record with testimony admissible in court as evidence of cancer cure. The Hoxsey staff was not disbarred, yet your spokesman said that the court proceeding determined that Hoxsey was a fraud. He also deplored the money spent on "quacks" (Hoxsey) by cancer victims, but passed over the statistic that the average cost of treatment by "approved" methods is $6,000 and up while Hoxsey's top fee ranges to about $400. By A.M.A. statistics, 40 million of our population (one of four) will suffer from cancer. Now -- HOW MUCH is 40 million times $6,000? I'm just asking... But I know that if a foreign enemy did harm to us comparable to 40 million cancers, no chances would be over-looked.

"In that connection your spokesman failed to mention that Hoxsey has repeatedly asked for thorough and IMPARTIAL investigation. And that a delegation of "standard" doctors made one, giving Hoxsey their unanimous approval. They verified many cases of cured cancer. Does this make them quacks too? For the sake of many physicians of greatest integrity I regret that the A.M.A. has gone so far out on a limb that there is no way down. The fall will injure respectable physicians and damage public confidence. Millions of people are hearing the truth in this land of free speech and there is no more stopping it than the light of day."

H.D.C.

DEFENDER MAGAZINE (Wichita, Kansas) will send, for $1.00, a "Truth Pack" of some 15 informational items concerning the HOXSEY TREATMENT for cancer. Recommended. Order from Defender and pass along to cancer victims - and help break the hold of the medical octopus. And/or join the National Health Federation, 2452 Van Ness Ave. San Francisco 9, Calif. ($2.00).

PERIODICALS:

"LULL IS BROKEN - SAUCERS ARE BACK" is Editor Stringfield's headline for the first page of his ORBIT (August 3, '56. 7017 Britton Ave., Cincinnati 27, Ohio). Our guess is, he knows as well as anyone who has access to foreign sources that the only lull has been in the lull-a-by intoned by the Air Force censors. But he makes good by citing, with details, ten "cases" of UFO visitation reported to him in the last month. All together they constitute one more keyhole glimpse of the now-familiar Fortean 'procession of the damned'- including "Saucer Sundries" such as the following:

(Buenos Aires, via N.Y. Daily News): Monstrous spacemen reported to have landed in a 1000-ft.-long flying cigar on an Andean peak. A mining engineer said he sighted gigantic human tracks on the extinct volcano El Macon . . Gendarmes said they found other traces that might belong to 'outsize space cadets' on frozen salt lakes in the Andes.

If you open one of the year-books (say, Jessup or Barker) reviewing UFO phe - nomena,, shut your eyes and put down one finger, you will light on some incident too doubtful and fantastic to be believed. Our point is, there's no difference between a gnat and a camel if both are equally strange to you. Which is the more incredible, a pickle-sized humanoid or a forty-foot giant, a four-arm green goblin or a flying pig over North Carolina (Did they hear it grunt? asked the Yada). Or, if you leave the door open onto Cloud-Cuckoo Land, any thing and any-body may walk in. Nothing is more wonderful than anything else, and the not-wonderful is simply the familiar. How you can wiggle your finger is a miracle be-yond science (as Edison once pointed out). Our guess is, the omniverse swarms with life and action, and 99.9999 per cent of it is beyond all knowledge, science, prob-ability and known law - and all speculation (including this one) is the crackling of dry thorns beneath an empty pot . . .

PENDULUM - LE PENDULE, has few or no dull spots for the 'radiesthetist'; and Noel Macbeth, writing in the July issue, answers questions our Associates are con-stantly asking: "What is this radiesthesia? The old water-divining faculty dressed in a new garb . . . Influences derived from the substance examined indi - cate its qualities, and things do not have to be producing an influence as strong as radium emanation for this to be done. Results show in fact that every piece of matter, whether a mineral or a living plant, or a living animal produces its corres-ponding influence perceptible to the operator, the radiesthetist . . . Today about 750 different books have been published, mostly in French, many in German and a few in English. It is reckoned that there are over 50,000 people who know how to use a pendulum or a diviner's rod, the majority being in France or Belgium. . . The recognition of what is buried underground or concealed within another substance (as a mineral sample or a living body) comes about through the fact that the de - tected influences are vibratory, and that a pair of substances of the same vibra-tion are linked through space, even when solid matter is intervening. Experiment shows this to be true, and by experiment also does one know that this connection is due, not to energy intensity ... but to the action of an intermediate force of Nature, which we define as a carrier wave. . . The reader who knows electronics will rightly conclude that radiesthesia is governed by laws akin to those of the wireless.'

(PENDULUM is published monthly by Markham House Press, Ltd. 31 Kings Road. London, S.W. 3, Eng. 12 issues - 26/- $3. 80. For details of subscription rates payable in Western European currencies, apply to 31 Kings Road, Lon. S.W. 3.(Issue of Aug.'56 contains important article by physicist C.F. Krafft).

FLYING SAUCER REVIEW; 5108 Findlay st. Seattle 18, Washington. R.J. Gribble, Ed. Copy, 30 ¢. Year $3.00. Order at least the August issue; special importance.)ML)

THE BORDERLAND SCIENCES REVIEW: Editor, Bruce Copen, L.Hy., F.B.R.A. "Vancosy", Nairdwood Lane, Prestwood, Bucks, Eng. Obtainable in the U.S. from John L. Albers, 308 14th Ave., Sterling, Ill. Quarterly. Annual subscr. 10/- Single copies 2/6d (about .50). A new publication (Vol. 1 No.2); 28 pgs mimeo. We quote a few items of interest:

Can Plants Hear? In Pondicherry, India ... music is daily broadcast to "listening" plants, with alleged favorable results. Other "amazing results" obtained with sugar cane and potatoes... One plant, a native of Cuba, 'predicts' volcanic eruptions and earthquakes by its movements. . . Delayed Signals? These are the KLEE-TV call letters of a station in Houston, discontinued in 1950 but picked up again in 1955. The BSR Review restates the circumstances.

In an article headed The Curse of Tut-Ankh-Amen Solved the Review translates from the French of Paris-Match; appears to make bats and fungi responsible for the deaths attributed to the Curse. Not too convincing but an interesting rewrite of the whole story.

PROCEEDINGS OF THE COLLEGE OF UNIVERSAL WISDOM: George W. Van Tassel, Editor. Yucca Valley, Calif. Monthly. Current issue is Vol. 4 No.4. A partial review of this publication appears in our CQC F-10 of August 1, pg. 4. Financed by contributions; send Proceedings a dollar or more for a few issues.

CORRESPONDENCE: Excerpts from letter, H.K. Hottam, 34 Queen St.,Melbourne, Australia; to CQC Director.

. . ."· Today I received Round Robin Vol. 11 (No.6). I think you may be interested to know that 48 hours earlier at a deep trance seance in our home, two of the items you stress were strongly enunciated by the Guide controlling, viz.

" A. Pg. 13 RR. "No earthian can make true space flight while in his normal physical body". Our Guide ridiculed the idea of man in his physical body being able to fly to the moon, etc. Has said the same at previous seances. (NOTE by CQC Editor: The M.P. Controls once pointed out, that reactions to conditions of space flight would be psycho-physical and out of control by physical treatment, medication etc.)

" B. Pg. 24, RR: "There will be no sudden and great disaster ...". Of recent years prophets of doom have been legion. Naturally we asked the Guide for his opinion; he replied almost word for word the same as the MP Control.

" Coupled with world cataclysms, have been assertions of the close approach of Messiahs, Avatars and the like. The British Israel people have been boosting the Second Coming as just around the corner. The Guide emphatically denied this, but said there would always be violent storms, rains, earthquakes etc. He added that the ever-growing spread of spiritualistic knowledge would be the only "Coming" until dogmas and creeds were 'washed up'. It is reassuring when ESP sources half a world apart are so unanimous on fundamentals. . ." H.K.H.

The BSR Director (CQC and Round Robin) receives many psychic and spiritualistic communications, but seldom prints them for obvious reasons - lack of detailed information, getting involved in controversy, unprovable assertions etc. A 'psychic' or ESP origin neither guarantees nor condemns any communication; there are too many unknown factors involved and definitive judgments are usually impossible. If we make a seeming exception in the case of the mediumship of Mark Probert, it is because we have observed the conditions and data carefully for nearly a decade and feel much confidence in the Controls and in the personal character and endowments of the medium. ml
